

# ISIP / UG Fellowship 2023 (International Summer Internship Programme)

## Opportunities for Design Students

PBLCOE-CGC Global Collaboration set a benchmark for Innovative learning methods.

### Benefits to students

- Certificate of completion
- Publishing of Technical Papers
- Letter of Recommendation
- Opportunity for Master's & Ph.D programs-Better placements
- Start-up guidance & opportunities

**For Design students following opportunities are offered by three different universities -**

**1) Projects – Teesside University, UK**

**Interaction and Environment (Graphic Design)**

Exploring how creative works can be situated in differing environments, and providing opportunities to inform, agitate, navigate, and enrich people's lives. You develop an understanding of how design and illustration is being used, and could be used in, innovative ways in commercial, social and public indoor and outdoor settings. Your project allows you to research, develop and apply innovative conceptual solutions of your own in an interactive design project.

**Global Sustainable Contexts (Fashion Design)**

investigate a range of contemporary social, environmental, technological and ethical issues that inform fashion. This project will broaden your understanding of fashion and design as a form of contemporary social discourse and explore a variety of issues through the development, production and presentation of potential future scenarios.

**Emerging Spatial Trends: Wellbeing and Sustainability (Architecture / Interior Design)**

You investigate the links between interior design and the built environment with new thinking on designing for health and wellbeing for sustainable future design. Promoting health and wellbeing through new materials and biophilic trends has rapidly gathered momentum and you will consider new approaches to design for future homes and buildings.

**For Design students following opportunities are offered by three different universities -**

**2) Projects – Poznan University, Poland**

**Smart home systems with renewable energy sources**

We want to invite you to our smart home classes. Our course consists of six weeks and lets you obtain knowledge about smart home systems: KNX, Loxone, Ampio, Deimic, Fibaro, Blebox, and knowledge about cooperation smart home systems with renewable energy sources. We offer practice classes with original elements of smart home systems delivered by manufacturers, webinars with manufacturers (with India workers too) and much more.

**3) Projects – CGC Aarhus University, Denmark**

**Business Modelling**

Business Modelling is an additional qualification to any designer to understand the business and business strategies, rather in present scenario it is an essential knowledge towards entrepreneurship. Designers need to understand Brand's business and suggest creative ways all the times. Detail Document for this as separately shared.
